ABOUT ME

Eager to contribute to the technological progress of the world since I believe it can greatly improve people's lives.

This is the reason that brought me to study computer science since secondary school. From that time, I have matured a huge passion for mobile development and recently published an iOS app on my own.

I really would like to keep deepening my knowledge in this field and find a job that fully satisfies me, in which I can grow every day and deliver high quality products used by millions of people all around the world.
